

# SOIL SAMPLING TIME MACHINE

**It's like clockwork:**  
Harvest in full swing.  
Weather moving in.

Waiting for soil sampling.

Fertilizer on hold.

Patience wearing thin.

Your money is on the line.

***Falcon eases  
tight schedules  
and transports  
error-prone probes  
into history books***

The Falcon automated soil sampling system keeps fertility decisions and fieldwork on track by collecting cores at equal depth and distance every 1 or 2 seconds, depending on operating speed.\*

While the operator stays comfortable in the truck, Falcon pulls uniform cores and blends them into consistent soil samples. Then it automatically bags and geotags samples for a seamless tie between field, soil lab and precision ag technology. Fast and accurate, in any sampling program, day or night.

Falcon sample quality leaves hand probes in the dust because it delivers ultimate confidence in fertility recommendations and more control over input costs.

**Now you really can buy time – and peace of mind. Because nothing delivers better soil samples faster than Falcon.**

\*Falcon collects 30 cores/minute at ≈5 mph and 60 cores/minute at ≈10 mph. Speed depends on field conditions. Whether conditions let you roll at walking pace or the 15 mph top speed, Falcon works faster. Visit [falconsoil.com](http://falconsoil.com) to learn more. Or better yet, give us a call.
